🚀 **Excited to share my latest project: JARVIS AI – Autonomous Agent with Reasoning, Search & Document Intelligence**

I built an advanced AI assistant using LangChain and Groq that can think step-by-step, perform intelligent web searches, and generate accurate responses autonomously. The system also supports PDF-based analysis, enabling it to extract and understand information from documents in real time.

🔹 **Key Features:**

- **Multi-step reasoning (THINK → SEARCH → FINAL)**
- **Real-time information retrieval**
- **PDF document understanding**
- **Interactive professional dashboard (Streamlit)**

This project helped me explore how autonomous agents can simulate human-like problem solving and decision-making.

Looking forward to feedback and suggestions! 🙌
